

Value Based Healthcare Trends for Employers April 10, 2019

The Cincinnati/Dayton ISCEBS Chapter is proud to host its next educational event at The Christ Hospital, a local leader in value based healthcare and consistently recognized as one of the nation's top hospitals for quality outcomes.

Join us on April 10th as we hear how The Christ Hospital is improving health outcomes and costs for employers and their employees through their Centers of Excellence Program and Physician Lead Chronic Disease Management program.

Christ Hospital's Centers of Excellence program has established over 150 partnerships with local and national employers, and provides a win-win situation by providing:

- bundled negotiated pricing for high cost orthopedic, spine and cardiovascular services;
- customized care advocacy for patients and their families throughout the process; and
- care warranties to ensure accountability of quality outcomes and reduced costs for readmissions, infections and other avoidable complications.

Christ Hospital's Physician Lead Chronic Disease Management program has led to exceptional results through sustained improvement of chronic diseases such as hypertension and diabetes within their employee population, as well as reduced health plan costs. Hear what they've learned on this journey and how they're planning to advance it to other employers in the Cincinnati area to improve chronic disease management.

The presentation will be conducted by Tim Cappel, Executive Director of Population Health Program, Ken Schorsch, Director of Business Development of Population Health Programs, and Daniel Raterman, Director of Business Development of Population Health Programs.
